

Calvin Chadwick

Games Programmer

Portfolio: <https://calvinjchad.github.io/calvinjchadwick.github.io/>

I strive to be my best self, both inside and outside the workplace. By working hard as an individual and with others, I believe I can achieve this and bring something great to the workforce.

Experience

Abertay University, Dundee – Lab Assistant

September 2025 – November, September 2026 – Current

Contracted by the University after recommendation from academic staff to assist with the Mathematics for the Application Development 2 module (2025) and the Data Structures and Algorithm 1 module (2026). Helping students grasp concepts in both mathematics and coding and enhance their problem-solving abilities.

Design Office, Crewe – Web Design Work Experience

March 2023

During my time at Design Office, a web design company, I had the opportunity to learn HTML and CSS and apply them to a real-world scenario, creating my very own portfolio page. My time at Design Office helped to improve my management skills, as I had to create and make improvements to my portfolio page in a given set of time before moving on to the next task.

Air Cadets, Chester

September 2021 – June 2024

Joined the Air Training Corps and was promoted to a Corporal. My time in the Air Cadets has emphasized the importance of good communication and leadership skills, as well as improving my organization – skills that are crucial in any working force.

Education

Abertay University, Dundee – BSc (Hons) Computer Game Applications Development

September 2024 – Current

- Predicted Degree Classification: 1st
- Relevant Modules:
 - **Professional Project:** Systems and UI Programmer working in a multidisciplinary team for a semester's game development project. Involved frequent presentations and progress updates with game industry mentorship, as well as maintaining a technical document for the project.

Skills

- Coding Languages: C++, C#
- Experienced Gameplay Programmer
- Strong knowledge of the Unreal Game Engine
- Experience using Unity
- Knowledge of State Trees and Behaviour Trees
- Knowledge of shader programming
- Communicating, Collaborating and Presenting
- Source control using Git/Perforce

Hobbies

- Delving into the game design and technicality behind some of my favourite games.
- Tabletop and roleplaying games like Warhammer 40k and D&D respectively.
- Hiking and exploring.
- Learning the guitar and playing different tunes.

Created using Unreal Engine and C++.

- **Gameplay Mechanic Development:** Designing, prototyping and programming of a gameplay mechanic using Unreal Engine and C++.
- **Artificial Intelligence:** Use of Unreal Engine Behavior Trees to create a basic Stalker/Pursuer AI.
- **Game Programming and System Architectures:** Integrating gameplay systems like physics, audio and player controls into an Entity Component System ran game running on PlayStation hardware.

Tarporley Sixth Form College, Cheshire

September 2021 – May 2024

- A-Level Maths – A*
- A-Level Further Maths – A
- A-Level Physics – A
- A-Level Computer Science – A

Projects

Murder At The Clocktower – Dare Academy – Programmer

2026

Systems and UI programmer on “Murder At The Clocktower”; a game that our group decided to expand and polish further upon as part of Abertay’s Dare Academy competition. We spent 4 weeks of rigorous work on the game on campus. Upholding a consistent schedule and showing off and discussing the game with industry mentors. This ended with us presenting the game at the DCA in Dundee and us winning the Dare Academy runner-up prize for the game.

Skills used:

- Co-programmer on the team – developed using the Unreal Engine with a mixture of Blueprints and C++.
- Strong communication skills for demoing the game to industry mentors and the general public at the DCA.
- Working on and maintaining multiple systems: including character controls, UI and puzzles.
- Collaborating with designers and artists to help implement and further refine their designs.

Source control using Perforce and task management using Jira.
